# Group Project Deliverable #4: System Prototype

April 21<sup>st</sup>, 2025

**Bailee Strait, Jace Calvert, Poppy Dalton, Alex Copeland**

## Prototype Flow

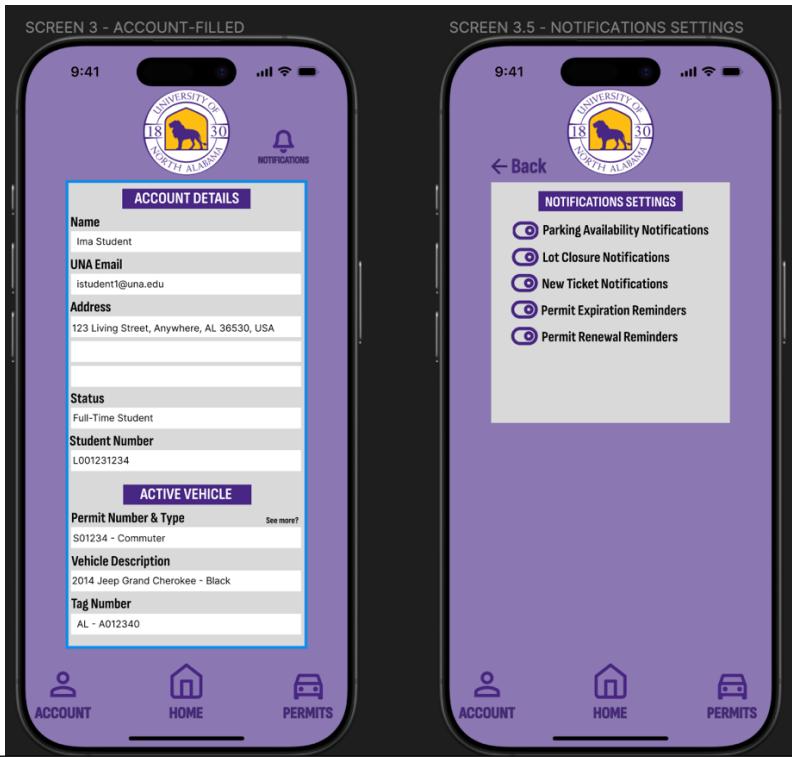

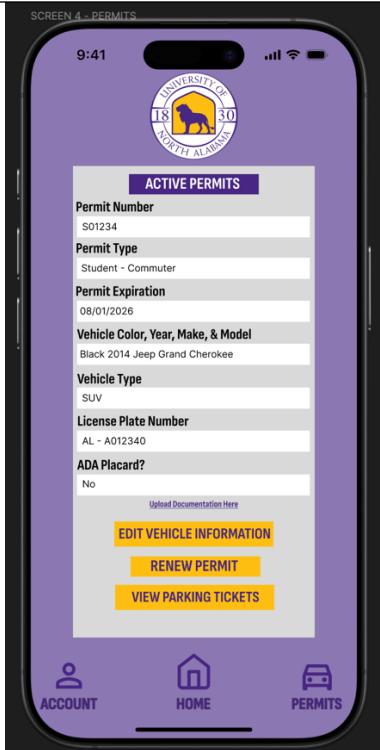

Login integrates with UNA Ellucian System for credentials.

Following login, users are met with a unique home/landing screen displaying their name and the type of permit held. There is an interactive map of campus along with a search bar to search for a specific location on campus. Below that, a list of available parking unique to the user's permit is displayed. At the bottom of the screen, a toolbar with buttons for accessing the user's account, permits, and returning to home are shown.

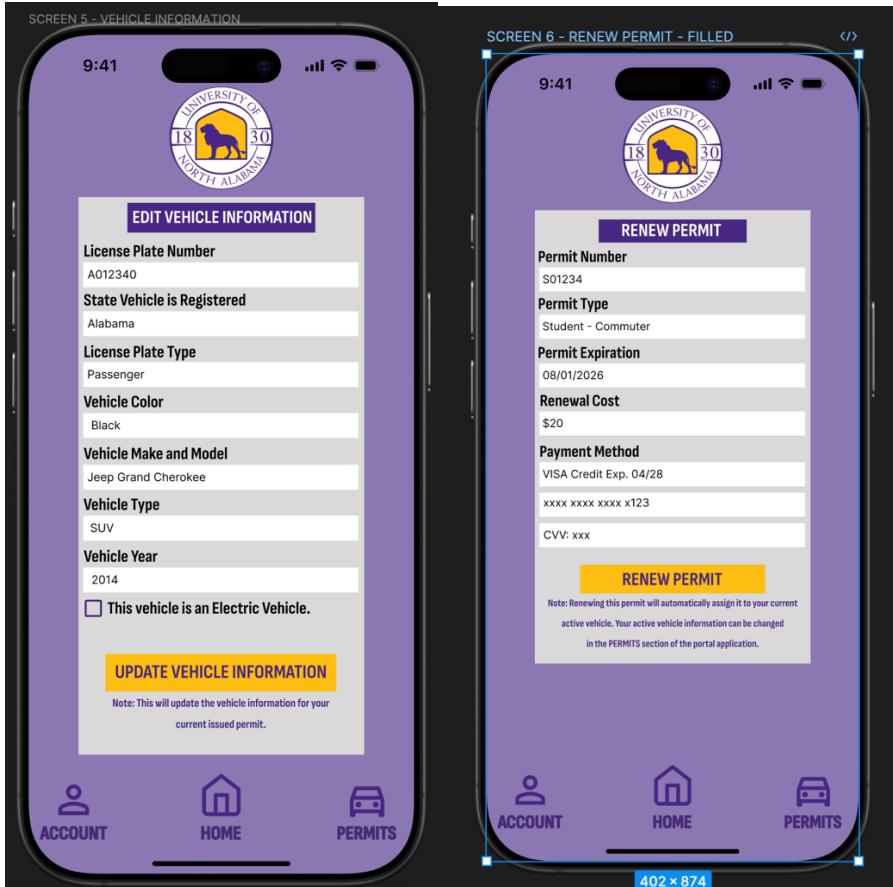

Users can select a parking lot name on the home/landing screen or search for a location/lot using the home/landing screen search bar to see its location on UNA's campus.

Selecting the Account button navigates the user to see all details for their account. From here they can use any button on the toolbar to navigate around the app, select the Notifications button to adjust notification preferences, or select “See more?” regarding their permit number to be automatically redirecting to the Permit screen.

Navigating to the Permits screen will show the user's information regarding their active permit. The user can then use the toolbar buttons to navigate to other areas of the app. The button “Edit Vehicle Information” will redirect the user to a screen where they can update the vehicle information for their current issued permit. The button “Renew Permit” will redirect the user to a screen in which they can renew their issued permit. The button “View Parking Tickets” will redirect the user to a screen in which they can view past parking tickets and current issued parking tickets that need to be paid.

The user can edit their vehicle information and update it for their currently issued permit.

The user can renew the issued permit on their account.

The user can view the tickets for their account. This includes paid tickets, appealed tickets, and issued tickets.

For issued tickets, a user can view more information. They can pay the ticket or appeal the ticket if they disagree for the reason issued.
